

Mission Statement
of art. 5 of Law 4972/2022
of the Hellenic Hydrocarbon and Energy Resources Management Company S.A.

Hellenic Hydrocarbons and Energy Resources Management Company (HEREMA) plays an essential role in realizing Greece's potential as a leading energy and carbon abatement resource.

Fully owned by the Greek state, HEREMA licenses and manages the development of energy resources that are deemed key for Greece's transition to a robust and sustainable energy system. With key responsibilities to the energy transition, HEREMA has been appointed as the manager on behalf of the Greek State of its exclusive rights for the exploration, and exploitation of hydrocarbons; being the licensing authority for underground storage of carbon dioxide and other fluids; as well as for the Offshore Wind sector; and acts as the interim Competent Authority for Safety in Offshore Oil and Gas Industry.

Through our acquisition of DEPA International Works, HEREMA participates in important infrastructure projects, such as the IGB and East Med pipelines.

HEREMA works closely with all key stakeholders to foster the transition to a low-emissions future and carbon neutrality. We are committed to adding value across the full range of our activities; by collaborating with investors, building partnerships with well-established research institutions and civil society, and creating synergies for the advancement of energy technologies.

Athens, 07/12/2023

On behalf of the Board of Directors
